

The City of Olean is seeking quotes to replace an existing 16-camera DVR. We are looking at replacing it with either an analog system or a hybrid unit that will record analog and IP cameras – we will decide on which one once we have pricing. The system will need at least one (1) TB of memory and the ability to be backed up to an external hard drive. No cameras will be part of this purchase, just the DVR unit.

Price shall include set-up, installation, and some basic training on the system.

Please include all specification with unit quoted.
